TITLE: Product news: CD11a: a promising target for immune  
intervention.

SOURCE: INPHARMA 14 Sep 1994 ISSN: 1173-8324

DOCUMENT TYPE: (MIX)

WORD COUNT: 154

TX Targeting the **CD11a** adhesion molecule 'could be of major  
interest in the manipulation of the graft recipient's immune system', say  
French researchers. They found that prophylactic use of an antibody  
directed against **CD11a** was effective in preventing early  
rejection in renal allograft recipients, in the first such study to be  
conducted.

15 patients received the anti-**CD11a** antibody 10-20 mg/day,  
corticosteroids and azathioprine for 10 days after renal transplantation.  
Cyclosporin was introduced on day 8. Corticosteroid treatment. . . the  
first 3 months, but all kidneys remained functional during 12-19 months of  
follow-up.

The antibody was very well tolerated. Transient **fever** was  
experienced by 6 patients, and ALT levels were slightly raised in 5.
